

# Atlas Discovery and Certificate Management

## DISCOVER ALL SSL/TLS CERTIFICATES REGARDLESS OF CA

Quickly and efficiently discover all SSL/TLS certificates from all CA's without the need for additional software

## ALIGN WITH BEST PRACTICES AND INDUSTRY REQUIREMENTS

Ensure your certificate hashing algorithms, key lengths and validity periods are aligned with best practices and industry requirements

## ONE CENTRALIZED INVENTORY

Create an inventory of all certificates in one location which is managed by GlobalSign's Atlas platform

## MANAGE SSL/TLS CERTIFICATES

Create an inventory of all certificates in one location which is managed by GlobalSign's Atlas platform

## NO MORE MANUAL SEARCHES

Save valuable time and resources by not having to manually search and rectify issues

## AVOID EXPIRY AND REPUTATIONAL DAMAGE

Avoid expired certificates which affect traffic to websites and company reputation including processes dependent on encrypted communications

## Understanding the Risks of Not Managing Your Certificates

There is nothing worse than installing certificates only to discover that they have expired, or that the hashing algorithm or key lengths used do not meet standard protocols. Keeping track of your certificates might be harder than you think, as they are likely to be scattered across multiple public and private networks, with different expiry dates and potentially sourced and installed by different users who may have left your organization. There are several potential ways to keep on top of your SSL/TLS certificates, and the key takeaway is to make it as automated and centralised as possible.

### SSL/TLS Certificate Discovery and Management at Your Fingertips

Atlas, our digital identity platform, provides discovery and certificate management functionality as standard. Allowing you to take control of your SSL/TLS certificate estate and ensure that you not only know where all your certificates are, but that they are up to date, and can be viewed and managed in one place. By using these tools, you can:

- Avoid certificate expirations
- Keep up with best practices
- Efficient certificate management

### Locate Every SSL/TLS Certificate with Atlas Discovery

Atlas Discovery finds every SSL/TLS certificate on all your private and public networks, so that you can obtain a full inventory of all your certificates. The resulting inventory is available directly on Atlas allowing you to view upcoming renewals, key lengths, signature algorithms, and remaining validity periods.

### Certificate Management

Certificate Management is an additional tool that is offered within Atlas and allows you to request, view and revoke your SSL/TLS certificates quickly and easily by either using the API or directly from the Atlas portal. This has been designed to allow you to keep track of your certificates and make basic but critical changes without the need for additional software or management tools.
